

South African Smart Energy Technology

Who is EASIWise?

A locally developed smart energy technology platform, built around intelligent hot-water control.

We design and develop **smart geyser control** products for South African homes, with a focus on practical **energy savings, remote access, protection** and long-term reliability.

From our earliest basic timer products to our new **Delta** and **Delta MAX** range, we have built our technology from the **inside out**. That includes the product design, housing, internals, software and control logic behind our devices.

EASIWise is not a white-label import or a generic controller with a local badge. We are a **South African** product development company with our own technology, our own product roadmap and a long-term commitment to making **hot-water control smarter, safer and more efficient**.

What makes EASIWise different?

- ✓ We design our own products in-house and we manufacture **locally in South Africa**.
- ✓ We **own** the internals, software, housing, control logic and product design.
- ✓ We have **strong relationships** with our suppliers, hardware partners and engineering skills base.
- ✓ We build around **real South African homes**, energy costs, grid conditions and installation realities.

Built from practical experience

The first **EASIWise controller** was a basic on/off timer, designed to help households control when their geyser operated. Since then, each generation has **moved the technology forward**.

Today, our fourth-generation **Delta platform** brings together remote access, smart scheduling, protection features, fault awareness and **AI-powered insights** into a new generation of **EASIWise** products.

Designed in-house, supported by strong partners

EASIWise owns the **full design of its products**. This gives us control over how our products work and how they **evolve in response** to the real needs of **homeowners, installers, insurers and energy partners**.

Our in-house capability is supported by **strong working relationships** with our suppliers, hardware partners and engineering skills base. These relationships and our experience in the field gives us access to **practical manufacturing input, technical support and product development knowledge**.

A new chapter for EASIWise

From smart control to a smarter energy platform

After nearly **two decades** of trusted work, and with thousands of **EASIWise** products installed in homes across South Africa, we are **strengthening our product line** and introducing a new generation of devices built around the **Delta** platform. This new direction combines the experience of previous **EASIWise Smart Controllers** with a more modern, **connected and scalable product architecture**.

The goal is simple: **Make geyser control more useful**. We want homeowners, installers, insurers and energy partners to have **better visibility, better protection** and **better control** over important energy systems.

The product direction

Our current product ecosystem already supports **connected hot-water control** through smart geyser management, solar water-heating innovation and **app-based access**. The new **Delta** range takes that foundation further:

With Smart Geyser Protection

DELTA

Our next-generation **smart geyser controller** for standard electric geysers, built around intelligent timer control, remote access, protection features and smarter visibility.

With Smart Geyser Protection & dedicated Solar/PV heating

DELTA MAX

Built on **Delta** by adding a **dedicated PV panel system** for geyser heating and control, helping households **reduce the geyser's dependence** on the main electrical supply.

Delta devices universally fit standard electric geysers **of all sizes**. Quick and easy installation with **easy Wi-Fi connect**

Delta devices can be installed with a **leak detector** and automatic water **shut-off valve** to reduce the risk of water damage

Together, **Delta** and **Delta MAX** give **EASIWise** a clearer product family, a **stronger technology platform** and a more focused direction for the future of the brand.

Practical innovation for South African homes

We believe innovation should **solve real problems**. For **EASIWise**, that means helping households:

- Reduce unnecessary electricity use.
- Manage geyser operation more intelligently.
- Protect against leaks and faults.
- Access and control their geyser remotely.
- Gain better visibility over hot-water energy use.
- Support local manufacturing and job-creation.

Where we are going

We have moved from a basic timer to a fully remote, **smart and AI-powered platform**. The next chapter is about taking that **foundation further**, with a refreshed brand, a stronger product family and **technology that continues to be developed here in South Africa**.

EASIWise is a locally developed **smart energy technology platform**, built around intelligent hot-water control.
